## From primer to gloss we've got you covered

Whether it's internal paint or external paint; paint for wood, plaster, masonry, plastic, laminate or metal, you'll be surprised how adaptable our products are. All have been tested to ensure the best possible performance. All are premium quality 100% pure acrylic, water-based products that can be cleaned with water alone. What's more, with infinite colour solutions all finishes can be tinted to any colour you desire.

What's more, we understand how important getting the right colour is to you. So why settle for a colour that's close enough? Your vision deserves more, and you deserve the exact colour you need for your project. With our infinite colour solution technology we can create any colour you desire in any finish you want.

### Acrylic Matt

Acrylic Matt has a very flat, chalky finish, perfect for interior ceilings and walls in low to moderate use areas. Due to its excellent adhesion to all substrates it can also be used on other internal surfaces that are unlikely to receive impact or abrasive damage. The extreme matt appearance of this product coupled with the high solid content and pure pigments used with the Painfinity system creates exceptional depth of colour.

It can be used as a primer for bare wood and a mist coat for sealing new gypsum plaster and plasterboard jointing compound prior to applying top coats. This means one product is all you need and you save on labour and product.

### Acrylic Low Sheen

Acrylic Low Sheen is a versatile and durable low reflective paint with the hiding qualities of a matt finish, whilst also being resistant to marking and burnishing. Marks and scuffs can be easily cleaned by wiping with a damp cloth. The high scrub resistance and inherent resistance to mould growth make this product an ideal paint for all internal walls, surfaces and trims, including those situated in wet areas and high use areas where a matt effect is desired.

As with Acrylic Matt, it can be used as a primer for bare wood and a mist coat for sealing new gypsum plaster and plasterboard jointing compound prior to applying top coats. Again, this means one product is all you need and you save on labour and product.

### Acrylic Satin

Acrylic Satin sets the standard for eggshell equivalent interior and exterior acrylic coatings for walls and woodwork. It combines the toughness previously only associated with oil finishes, with the ease of handling and fade resistance of a pure acrylic, water-based paint. Because of its wash-ability, high scrub resistance and inherent mould growth resistant properties it is ideal for all external walls and internal walls including those situated in wet areas, high use areas and where maintaining hygiene is important. This product is also perfect for use on internal and external timber, and has excellent adhesion to all substrates including aged alkyd / oil finishes, which means you don't have to prime previously painted surfaces.

### Acrylic Gloss

Acrylic Gloss has the depth of finish and toughness previously only associated with oil finishes, but with the ease of handling and convenience of a pure acrylic, water-based paint. As with Acrylic Satin it is washable, has high scrub resistance and is inherently resistant to mould growth, making it an ideal paint for all internal and external walls, including those situated in wet areas and high use areas where a high sheen level is desired. This product works well on internal and external timber, plastics, laminates and metal, and like Acrylic Satin you don't have to prime previously painted surfaces.

### Acrylic All Purpose Primer

Acrylic All Purpose Primer is a premium quality pure acrylic multi-purpose primer / undercoat with excellent adhesion to all substrates including aged alkyd / oil finishes, plastics and laminates. It dries to a smooth finish that can be sanded easily if required and has very good 'hold out' properties that ensure the sheen levels of top coats always appear at their best. It can be used in interior or exterior applications.

\* Apply a proprietary metal primer prior to applying top coat.

\*\* It is essential that plastic surfaces are cleaned and sanded to provide a key, followed by an application of Paintfinity's Acrylic All Purpose Primer before applying top coats.
